EN 71-3:2019 Safety of toys – Migration of certain elements

Dear Sirs,

Coates Screen Inks GmbH has charged an accredited laboratory to test printing ink samples (scraped-off material) regarding heavy metals content according to toy standard EN 71-3 "Safety of toys – Migration of certain elements". According to test results we can declare:

The printing inks of these series

- CP
- HG
- PF
- PP
- TZ
- UV 650018
- YN
- Z
- Z/GL
- ZGM
- ZE 1690
- ZMN
- Z/PVC

Blatt 2 zu unserem Schreiben vom 21.04.2020 an

of these colour shades

- Standard
- C-MIX 2000
- Process
- Silver
- Fluorescent
- Transparent
- high density standard (HD)

which have been processed with thinners, retarders, hardeners, manufactured at Coates Screen Inks GmbH, Germany, comply with the requirements according to toy standard "EN 71-3:2019 Safety of toys – Migration of certain elements (Category III: Scraped-off material)". All limit values are met.

The bronze colour shades -76-NT, -77-NT and -78-NT do not comply with EN 71-3:2019 requirements, because the use of copper powder as a pigment leads to exceeding copper limit value. The bronze colour shades -76-AB, -77-AB, -78-AB as well as -76-MG, -77-MG and -78-MG may be used as alternatives. These bronze colour shades contain pigments which meet the requirements according to EN 71-3:2019.

Best regards,

Coates Screen Inks GmbH
